

PDF Utilities

A web-based application for manipulating PDF files and images with various tools including conversion, compression, merging, and page management.

Features

- **Image to PDF:** Convert images to PDF
- **PDF Merging:** Combine multiple PDFs
- **PDF Compression:** Reduce PDF file size
- **Target Size Compression:** Compress PDFs to specific sizes
- **Page Management:** Remove specific pages
- **Mixed Content Merging:** Combine images and PDFs
- **Image Compression:** Reduce image file sizes
- **Page Reordering:** Reorder pages in PDFs

Directory Structure

 Copy

│   └─ server.py    # Flask server
└─ temp/            # Temporary storage (created at runtime)
```

Installation

1. Make sure you have Python 3 installed
2. Run the setup script:

bash

 Copy

```
./main.sh
```

This will:

- Create necessary folders
- Install required dependencies
- Set up all scripts
- Create the web interface

3. If you get permission errors, make the scripts executable:

bash

 Copy

```
chmod +x main.sh
chmod +x start.sh
chmod +x scripts/*.sh
chmod +x web/server.py
```

How to Use

1. Start the application:

bash

 Copy

```
./start.sh
```

2. Your browser will open to `http://localhost:8000`
3. Choose a tool from the navigation menu
4. Upload your files and select options
5. Click the action button (Convert, Merge, Compress, etc.)
6. The processed file will download automatically
7. To stop the application, press `Ctrl+C` in the terminal

Requirements

- Linux or macOS
- Python 3.6+
- The following tools:
 - ImageMagick
 - Pdftk
 - Ghostscript
 - Flask (Python package)

The setup script will check for and install these requirements if they're missing.
